

Repository Analysis Report

for [universal-eduplatform](#)

- Repository Name: [universal-eduplatform](#)
- Owner: [LISA-ITMO](#)
- Created at: 01.07.2024 13:24

Statistics	Values
Stars Count	4
Forks Count	1
Issues Count	1

Metric	Values
README Presence	✓
License Presence	✓
Documentation Presence	✓
Examples Presence	X
Tests Presence	✓
Description Presence	✓

Repository Structure:

- Compliance: The repository structure appears reasonably well-organized, separating concerns into analytics, client (with subdirectories for web, mobile, and tgbot), subjects, tests, users, compose, docs, and other essential files. The use of Docker Compose is a positive sign.
- Organization: The project exhibits good organization with clear separation of concerns between backend services (analytics, subjects, tests, users) and frontend clients (web, mobile, tgbot). Docker configuration suggests a microservices architecture.

README Analysis:

- Quality: Good. The README provides a comprehensive overview of the project, including a demo, documentation links, installation instructions, and contact information.
- Project description: Yes
- Installation: Yes
- Usage examples: Partial
- Contribution guidelines: No
- License specified: Yes
- Badges present: Yes

Documentation:

- Tests present: Yes
- Documentation quality: Good. The documentation includes architecture, use cases, ER diagrams, sequence diagrams and an evaluation algorithm.
- Outdated content: No

Key Shortcomings:

- Lack of explicit contribution guidelines: While the README provides contact information, it lacks a clear process for external contributions (e.g., coding style, pull request procedures).
- Complex Docker setup: The multiple .env files and compose files suggest a potentially complex deployment process that could benefit from simplification or more detailed documentation.
- Frontend code duplication: Presence of both 'client/web' and 'client/web-new' suggests potential code duplication and maintenance overhead. Clarification on the intended purpose of each is needed.

Recommendations:

- Implement a CONTRIBUTING.md file to clearly define contribution guidelines, including coding standards, testing procedures, and pull request requirements.
- Simplify Docker configuration: Evaluate opportunities to consolidate .env files or streamline the compose setup for easier deployment and maintenance.
- Resolve frontend code duplication: Determine the long-term strategy for 'client/web' and 'client/web-new'. Either merge them into a single codebase or clearly define their separate roles and ensure consistent updates.
